EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Victoria Donnelly on 9/7/2005.

The application has been amended as follows:

In claim 18, line 13, delete "if the optical signal power is below a loss of signal (LOS) power threshold,".

In claim 23, line 26, delete "if the optical signal power is below a loss of signal (LOS) power threshold,".

The change is necessary to more clearly define the patentable subject matter claimed in the instant application.

In addition to the statement of reasons for the indication of allowable subject matter, the following is an examiner's statement of reasons for allowance:

As discussed in the previous office action, a method and apparatus for operating plurality of electronic variable optical attenuators (eVOAs) are known in the art. Such method and

Art Unit: 2874

apparatus are designed to select each eVOA from plurality of eVOAs and operate the selected eVOA in accordance with certain operating criteria.

Ko et al (US 6,600,594 B1) discloses the closest prior art, wherein each of a plurality of eVOAs is operated such that attenuation levels are adjusted in finite steps until desirable attenuation level is achieved. (see the previous office action for detailed discussion about the operation of Ko et al.'s device)

However, none of the prior art, including the Ko reference, fairly teaches or suggests a method and apparatus for setting the attenuation of the selected eVOA to substantially **maximum attenuation level** and changing the attenuation by decreasing and increasing the attenuation **in finite steps** until the desired power level is detected or the maximum attenuation for the selected eVOA is reached. *Prior art devices work in opposite manner*, wherein the attenuation of a selected eVOA is set to a *minimum level* and modulated by increasing the attenuation in various steps until a desired optical power level is reached.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sung H. Pak whose telephone number is (571) 272-2353. The examiner can normally be reached on Monday- Friday, 9AM-5PM.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
